

# Cpt Assistance Tool Away With Your Internal External Hemorrhoid Coding

**Y**ou cannot select a hemorrhoidectomy code if you do not know the distinction between internal and **external hemorrhoids**. Read on and get to know the anatomy and coding maze better.

Location should guide you the way in which **Outside hemorrhoids** take place outside the 'anal verge' which is at the distal end of the anal canal. On the other hand, **internal hemorrhoids** are proximal for the anal verge and may be much more difficult to diagnose and treat. Key to identifying various **hemorrhoid** types is the dentate line. The line's a mucocutaneous junction about a centimeter above the anal verge and can be seen separating the anus from the anus.

While internal hemorrhoids take place above the particular dentate series, outside hemorrhoids take place below the line. Best bet: Having the lingo might help you translate op notes, however having your personal doctor indicate "internal" or "external" will reduce virtually any potential coding mistakes. Search for 'internal' excision training Lack of specific internal hemorrhoid excision requirements can be perplexing. Solution: With the addition of the following text note, CPT 2010 gives you the permission to use use of certain codes for internal and/or external hemorrhoids: "For excision of internal and external hemorrhoids, see 46250-46262, 46320.
